Embodied carbon

What is true sustainability?_

“The climate emergency is now. As designers, we need to take immediate action to have impact.

TIDE is a truly long life, loose fit new structure, adaptable to an unknown future.

TIDE reports its carbon with integrity. We have class leading quantities of cement replacement creating probably the most sustainable RC structure of this scale in London.”

Mark Tillett, Heyne Tillett Steel

Structure is responsible for up to 60% of carbon emissions at practical completion. The material you build from and grid you build to has a greater impact on sustainability now and in the future than any other decision. Choose your building wisely.

Embodied carbon

What should an occupier be asking of a building?_

Are your embodied carbon numbers transparent, taking into account all actions from demolition to practical completion?_

TIDE measures all embodied carbon from demolition, excavation, temporary retaining structures through to the permanent structure achieving a market leading embodied carbon rating.

Are you using the highest proportions possible of the most sustainable materials available today?_

TIDE uses locally sourced aggregate and GGBS cement replacement at an average rate of 65% across all elements. This is industry leading in its proportion to Ordinary Portland Cement.

Does your building genuinely pioneer and challenge the status quo of typical office design?_

TIDE has a progressive grid which creates a highly efficient and low carbon structure. It's designed to last and adapt and break with the 60 year cradle to grave of most office buildings. TIDE is a robust structure with inherent fire, acoustic and aesthetic qualities avoiding secondary applied finishes.

Embodied carbon rating of 562kg/CO²e/m² including demolition – 7% better than LETI current best practice target.

Embodied carbon

How does TIDE deliver?_

Re-used materials

Recycled sheet metals from the neighbouring buildings have been reused at TIDE. We are also locally sourcing all aggregate.

Uniquely efficient

TIDE is class leading in the adoption of high GGBS; 65% GGBS cement replacement reduces the overall embodied carbon of our reinforced concrete by 50% compared to a standard mix.

Responsible grid

True sustainability is building with the future in mind. TIDE has been designed with an efficient responsible structural grid, allowing it to be fully adaptable, easily becoming used for office space, residential, retail or life sciences.

180 years

TIDE has been designed to last generations. The concrete frame of the building is durable and will have the capacity to be adapted to changing trends over centuries to come.

LETI 2030

TIDE is a Net Zero Carbon building designed to meet London Energy Transformation Initiative (LETI) 2030 - with many new buildings only adopting LETI 2025, TIDE looks further, embracing the most ambitious future targets.

“At TIDE, there is a strong emphasis on empowerment. By educating and giving occupiers the right tools we can help them make the right decisions and ensure they stay Net Zero Carbon in operation.”

Clive Williamson, Hoare Lea

Staying
green in
the future_

What should an occupier be asking of a building?_

What NABERS rating will the new building achieve?

We have achieved 5 rating – this is setting the bar high, but without compromising normal occupancy.*

What will the building management team do to help maintain this rating?

Operational sustainability is founded on measurement, collaboration and information sharing, to find energy savings from day to day activities as well as longer term energy use and waste strategies. This is supported by Green Lease clauses and an Environmental Management Plan to provide a framework for the management team and occupiers' guidance.

Why is the building SMART enabled?

SMART systems and controls put operational sustainability at your fingertips, allowing you to see and take pride in the results – you directly influence your own energy consumption, that of your team and of your business, through the day to day decisions you make about lighting, heating, cooling, or even opening the windows.

Carbon in operation

How does TIDE deliver?_

Energy consumption

TIDE boasts a base building energy consumption of only 40 kWh/m²/year – 27% lower than the UKGBC target for 2025-30 – with energy metering throughout allowing close monitoring of usage.

43% less carbon emitted than the threshold under Part L of the Building Regulations (9% lower than the London Plan standards).

Smart-enabled

TIDE allows occupiers to control operational elements and inform operational decisions that will achieve a Net Zero Carbon building. From highlighting empty spaces that don't need lighting or heating, or bathrooms that don't need cleaning, to monitoring air quality so you can use the openable windows efficiently.

NABERS UK

TIDE has already received a BRE Design Reviewed Target Rating of 5* for its energy efficiency, water usage, waste management and indoor environment, encouraging a collaborative approach to driving down operational energy use.

Performance gap

Most new buildings suffer from what the industry calls 'The Performance Gap', i.e. what the building is designed to achieve vs what the building actually achieves in operation. All systems put in place at TIDE assume a realistic occupation, making the challenge to close the gap much easier.

Borough Yards

A unique social, cultural and shopping hub woven from historic urban fabric. The medieval street system has been revived to include an Everyman Cinema, dining options, from the likes of Brother Marcus, and shops including Paul Smith.

Highlights
 Bar Daskal
 Barrafina
 Brother Marcus
 Burger & Beyond
 Butchies
 Everyman Cinema
 Parrillan
 Vinoteca

With more museums and galleries than any other area of London, Bankside can rightly lay claim to the title of London's culture capital.

Culture vultures

< National Theatre

> Tate Modern

< Shakespeare's Globe

Enjoy works by Picasso, Rothko, and more at Tate Modern or take in a play in traditional settings at Shakespeare's Globe – both just a stone's throw from TIDE. Stroll a few minutes further along the Southbank to be spoilt for choice by the culture on offer.

It's not just cultural hotspots and gastro delights on offer. If you're just wanting to grab something for lunch or a quick coffee, TIDE has everything you need within a few minutes' walk.

Convenient and close.

< Saint Nine Coffee

> Black Sheep Coffee

Saint Nine and Black Sheep Coffee, both on Southwark Street, are great for a caffeine boost. Gail's Bakery at Neo Bankside is the perfect place to grab a croissant on your way in.

Summary specification

- New development designed by Squire & Partners, providing approximately 133,794 sq ft net commercial office accommodation, and 11,560 sq ft of affordable workspace.
- Designed to the highest environmental standards and to be Net Zero Carbon.
- Large reception area accessed from Emerson Street, with a floor-to-ceiling height of approximately 4.0m and potential to install future speedgates.
- Office floor-to-ceiling heights, between 3.10m and 3.88m. Clear floor-to-service ceiling zone of between 2.70m and 2.88m.
- External terrace space to all floors from 2nd floor upwards, with an extensive communal roof terrace.
- Basement cycle facilities with 196 double-stacked cycle spaces, 60 folding cycle lockers, 26 Sheffield stands, 2 accessible cycle bays, 284 lockers, bike maintenance area and 28 showers, with a dedicated cycle lift.
- Male, female, and disabled WC facilities to every floor. Gender neutral toilets on floors 1-11.
- Dedicated loading bay which is linked to a goods lift servicing all floors.
- Efficient and flexible heating and cooling system, designed to suit an occupancy of 1 person per 8 sq m.
- Concrete soffits with exposed services and suspended LED lighting.
- Building operation and occupier engagement app.
- 5 × 21-person passenger lifts. 1 × 26-person goods lift.
- Recycled raised access floor.
